

PACIFICO

PRODUCT:

BLEACHED SOFTWOOD KRAFT PULP

cmpc.

BRAND NAME: PACIFICO BSKP WOOD SPECIES: 100% RADIATA PINE

GENERAL DESCRIPTION OF PACIFICO

- Pacifico is known throughout the world as versatile pulp with consistent characteristics. It is used as a raw material in a range of products from printing and writing paper (coated or uncoated) to paperboards, tissue and other specialty products.
- Pulp strength is one of the most important properties of Pacifico pulp with a very good balance of high tear and good tensile, burst and fold properties.
- Pacifico pulp has a high coarseness and fiber length close to the market. Its attributes guarantee a very good performance comparable to dominating market pulps and boosted by its consistent quality given by a unique plant species.

PREMIUM QUALITY GRADES OF PAPER:

- Consistent pulp quality Pacifico pulp is absolutely essential for the modern paper mill. Because of its consistent quality, it is particularly suited for combinations with other pulps.
- **High Stable Brightness** Pacifico is a high brightness (≥89% ISO 2470) Radiata pulp.
- **Good Cleanliness** Pacifico is a softwood pulp with good cleanliness. These properties have enabled this pulp to find global acceptance with most printing & writing, converting and specialty paper producers. (dirt : ≤ 2,5 mm² /kg A.D. -ISO 5350-2)

ELICATIONS

TISSUE

• Because of its consistent quality, Pacifico is particularly suited for combinations with other pulps in tissue production.

- When absorbency is targeted, like in (kitchen) towels and napkins the share of BSKP (Bleached Softwood Kraft Pulp) needs to be clearly higher. Pacifico pulp shows good absorption properties
- Pacifico pulp needs an acceptable amount of refining energy to reach the desired strength level in order to minimize the generation of fines and maximize dewatering properties and bulk.

PACIFICO

PRODUCT: BLEACHED SOFTWOOD KRAFT PULP

PRINTING & WRITING

• Pacifico pulp has allowed papermakers to consistently produce premium quality grades of printing and writing papers, with an acceptable performance in terms of the strength - tensile index versus the tear index.

BOARD AND SPECIALTIES

- Pacifico pulp presents good strength, with a tear index aligned to most long- fiber pulps. The same applies to the tensile index.
- A good opacity/elasticity modulus ratio is desirable to avoid show-through and cracks/creases of folded cartons and boards; Pacifico pulp presents good performance in this ratio.

• Bulk and stiffness are important properties for most board applications. Pacifico pulp has a good bulk as well as a good stiffness to produce a board which performs well in folding and creasing.

CERTIFICATIONS

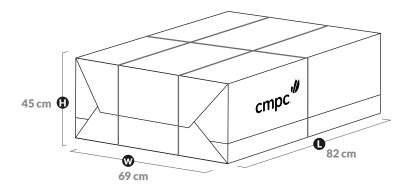

CMPC owns large Radiate Pine plantations to guarantee stable supply of wood raw material over the long term.

Pacifico BSK pulp has been certified according to the FSC™ (FSC-C007488) Chain of Custody standard. Likewise, all the products manufactured by CMPC Pulp have CERTFOR - PEFC Chain of Custody certification.

BALE INFORMATION:

Pacifico is in compliance to be used in contact with food and has the approval for use in Nordic Ecolabel paper products and EU Ecolabel for Graphic and tissue Paper.
